

Model PR Pressure Relief & Anti-Syphon Valve

Provides Peace of Mind & Environmental Protection

Designed to protect diesel and gas oil stored in above ground tanks the PR valve is installed within the suction line between the tank and pump. At rest the valve is in the normally closed position therefore retaining the fuel within the above ground tank whilst the pump is not in use. The valve automatically opens when the pump is running and allows the free passage of fuel "on demand". When the pump stops the valve returns to its normally closed position, once more retaining the product within the storage tank, providing environmental protection in the event of damage to the pump or pipework downstream of the PR valve.

The valve also incorporates an anti-syphon device to help prevent loss of product from leaks or pilferage.

The PR valve is also a requirement by Trading Standards where fuel stored in above ground tanks is offered for resale.

It should be noted that this product is not suitable for use with petrol.

Model PR Pressure Relief & Anti-Syphon Valve

Provides Peace of Mind & Environmental Protection

Specification

1 1/2" BSP Flanged ports

Inlet Strainer mesh

Maximum working pressure 49 psi (3.4 bar)

Maximum flow rate 110 Litres per minute

Horizontal or vertical mounting

Allows full air separation in suction pumps (requirement by Trading Standards for reselling fuel)

Installation:

Installation by Cameron Forecourt trained installation engineers

Serviceability

Fully supportable in the field by Cameron Forecourt trained service engineers.

Not suitable for use with petrol

Other Services Available from Cameron Forecourt

- Above & Below Ground Fuel Tanks
- High Accuracy Tank Gauging & Environmental Monitoring Systems
- Fuel Pumps & Adblue Dispensers
- Comprehensive Service Contracts and ad-hoc Repairs
- Web Based Fuel Management Systems
- Site Surveys
- Installation & Project Management
- Nationwide Support
